Alm Brand Group

Alm. resolves 84% of customer inquiries during Storm Malik with conversational AI

Innovation under pressure

When Storm Malik struck Europe in 2022, causing €380M+ in damages, Alm Brand was ready to meet the moment.

Leveraging conversational AI, the Danish insurance leader provided fast, reliable support for thousands of customers in crisis.

Weathering the storm

Storm Malik left 800k homes and businesses without power, triggering a surge in customer inquiries. Alm faced a critical challenge: providing rapid responses about coverage and claims for thousands of customers while alleviating pressure on their support teams.

They required a scalable solution to deliver results when their customers needed them most — and boost.ai answered the call.

2 AIs are greater than 1

Alm partnered with boost.ai to develop Albotta, a customer-facing AI agent, and Albot, an internal chatbot.

Built on advanced NLU, Albotta was trained on 1,000+ insurance topics and designed to provide instant, accurate responses 24/7 — even during peak crisis periods.

Albot empowered Alm employees with real-time information, so they could resolve inquiries faster and more accurately.

The Alm Brand logo, consisting of the words "Alm" and "Brand" stacked vertically in a white serif font, set against a solid blue square background.

Results that deliver

Alm's AI agent not only met the moment, they proved transformative in the wake of Storm Malik.

Albotta handled 2,000+ customer conversations, resolving 84% of inquiries without human intervention. Internally, Albot achieved an impressive 95% resolution rate.

In the following 6 months, Albotta engaged in 55,000+ conversations and answered 85,000 questions, empowering Alm to provide fast, consistent and compassionate service.

Bank

(Nordic anonymised)

Leading Nordic bank skyrockets automation rate with generative AI

Scaling with growing demand

A leading Nordic bank faced rapidly growing customer inquiry volumes, increasing from 4,000 to over 18,000 monthly conversations. They needed a solution that could scale efficiently, improve automaton and boost customer satisfaction without sacrificing response quality.

A strategic GenAI rollout

The bank partnered with boost.ai to strategically roll out generative AI capabilities within its AI Agent. Over a seven-month period, they incrementally increased the use of generative AI from 4% to 85% of automated conversations, continuously refining the agent's performance.

Measurable impact on performance

The data shows a direct correlation between the generative AI rollout and performance. As adoption increased, the overall automation rate climbed to 76%. Simultaneously, positive conversation feedback surged by 18 percentage points, and the "Unsolved" inquiry rate was cut by more than half.

Hallon

Telco slashes response times to under 5 minutes

A smarter way to scale support

Hallon faced surging customer inquiries that overwhelmed traditional support. Email response time stretched to over a month, and live chats frequently dropped. To maintain a seamless customer experience while scaling efficiently, Swedish telco Hallon turned to conversational AI.

Solving the backlog with automation

Hallon partnered with boost.ai to launch the AI agent, Berry across its digital customer service channels. Berry automated front-line support, reducing response times and increasing customer satisfaction by handling a wide range of product and service inquiries.

Measurable success with AI

Berry achieved a 90% resolution rate for automated inquiries and fully resolves 65% of customer interactions. It handles 40,000 conversations per month, reducing Hallon's support burden and eliminating a month-long email backlog, bringing response times down to under five minutes.

Expanding innovation

Hallon plans to expand Berry's capabilities beyond first-line support. Future developments include second-line assistance, lead generation, and customer retention strategies— all powered by boost.ai's conversational AI technology.

Fibia

Danish fiber provider boosts positive customer feedback by 20% with GenAI

Scaling support without compromising quality

As a leading Danish internet provider, FIBIA faced a high volume of customer inquiries that strained support teams. They needed a scalable solution to provide customers with immediate, 24/7 support without compromising the quality of service.

Intelligent automation built to scale

FIBIA partnered with boost.ai to deploy a conversational AI agent. Initially handling routine queries, the solution was enhanced with generative AI to provide more context-aware, human-like responses, moving beyond static answers and streamlining knowledge management.

Elevating the customer experience

FIBIA's AI agent now serves as a reliable first point of contact, reducing wait times and improving efficiency. This allows human agents to focus on more complex issues. Future plans include adding secure authentication to enable more personalized and proactive customer service.

Collaborating for impact

A close collaboration ensured the boost.ai platform was easy to implement and tailored to FIBIA's needs. This enabled their team to focus on strategic CX goals, establishing a partnership that has been key to the project's ongoing success and evolution.

Aspire

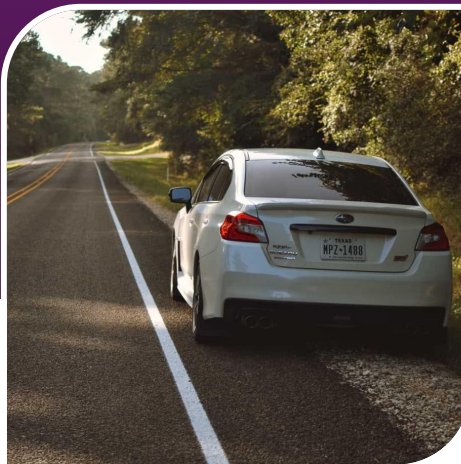

From long waits to instant support: an AI-powered journey

A commitment to innovation

As a leading private passenger auto liability and physical damage carrier, Aspire is always on the lookout for the latest technology to support customer service. Whether responding to direct queries from policyholders or getting lienholders and brokers the right information, Aspire's call center aims to deliver the best possible experience.

Obstacles to efficiency

Aspire's customer service team consisted exclusively of live agents, who struggled to meet rising call and chat volumes. Coupled with high staff turnover, this meant customers often waited half an hour to receive service. Aspire needed an AI agent to increase efficiency and the volume of interactions it could handle, while rededicating live agents to more complex queries.

Answering the call

Aspire sought a conversational AI platform capable of providing comprehensive support, that integrated with existing systems and offered limitless scalability — and boost.ai delivered.

Our no-code conversation builder makes it easy for Aspire to create deploy service flows for different groups, enabling 24/7 customized service for policyholders, lienholders and brokers.

Growth at scale

In the past year, Aspire has seen a 71% increase in chat volumes. Thanks to boost.ai, the company has been able to easily accommodate this increase and reduce wait times without adding to existing headcount. Best of all, Aspire's AI Agent is able to dynamically route incoming requests based on stakeholders' location and account status, ensuring timely and accurate service.

DNB

Norway's largest bank achieves 90% resolution rate conversational AI

Industry: Financial Services

Size: 3.3 million customers

Region: Norway

[Read the full case study](#)

A smarter solution for growing demand

As Norway's largest financial services group, DNB faced ever-increasing demand for accessible, reliable support. With 2.3 million user interactions to manage, plus a need to automate second-line support for its internal teams, DNB saw an opportunity to streamline service with AI.

Addressing diverse needs

DNB faced pressure to keep up with millions of user inquiries without compromising quality of service or increasing response times. Internally, second-line support teams were burdened by frequent requests that disrupted daily tasks. The company needed a flexible solution to streamline support and increase efficiency, without expanding headcount.

Two tailored solutions

boost.ai developed six specialized AI agents to provide second-line support across DNB's departments. They integrate with knowledge systems to create a single source of truth. With over 3,600+ intents and continuous user feedback, these AI agents evolve to meet departmental needs.

DNB's customer-facing AI agent, AINO, handles 140,000 monthly inquiries on common issues. With over 2,350 intents, AINO provides 24/7 assistance, achieving reliable service at scale.

Lightening the load

Thanks to its AI agents, DNB's internal teams now rely on fewer systems, while second-line support is free to focus on complex, high-priority issues. AINO deflects 70%–80% of all inquiries from live agents with a 90% resolution rate, leading the head of DNB's CS function to joke that his team "has nothing to do."

Nordea

Nordic banking leader achieves 90%+ resolution rates at scale

Scaling across four markets

Nordea needed to manage high customer service volumes across four Nordic markets. They required a scalable solution to provide consistent, 24/7 support, as previous chatbot attempts had fallen short of expectations and required too many resources to maintain.

A unified conversational AI strategy

Nordea partnered with boost.ai to implement a cohesive AI strategy, launching 12 AI agents (named 'Nova') for customer-facing and internal support. Boost.ai was selected for its platform maturity and superior NLU, replacing all previous chatbot vendors.

Measurable success with Nova

Nova handles over 220,000 monthly private banking conversations, achieving in-scope resolution rates above 90%. The boost.ai platform enables rapid AI training and easy content updates, significantly outperforming Nordea's prior in-house and external chatbot solutions.
