Meeting outcomes

The purpose of the workshop is to reflect on the progress made so far and define a shared vision for how Conversational AI can support DNA strategic goals going forward.

- Where are we today?
- Where do we want to go?
- How do we do it?

Arrival 11:30 EET (10:30 CET)

AI Vision & Roadmap

12:45

For every brand, the future *is* conversational

It will transform every interaction between people and businesses
across the channels we use today, and those yet to be imagined.

Gartner® | FORRESTER® | Deloitte.

AI is disrupting the global CX market

AI is reinventing customer experience – and boost.ai is **leading the charge**

Conversational AI is helping enterprises cut costs and drive revenue through CX processes

Cutting costs

AI Agents can efficiently manage **millions of interactions per year** vs. only thousands when relying solely on **human capacity**

7-8x

Estimated reduction in spend when using an AI agent

Driving revenue

Turning cost centres into **revenue generators**; using CX to **build loyalty and drive upsells and cross-sells**

42%

Sales lead conversation rate increase after implementing boost.ai to identify sales opportunities

70% of CX leaders say GenAI can significantly improve CX

Q. Do you think the latest AI technology can significantly improve customer experience?

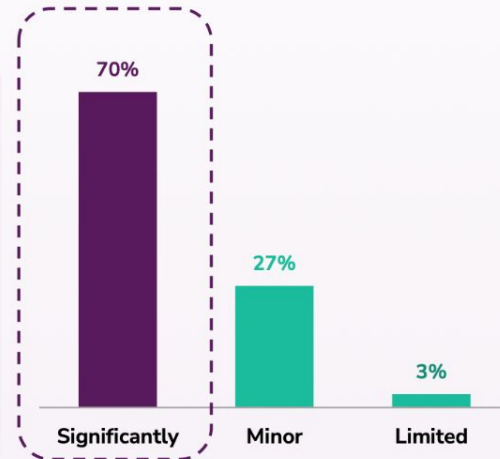

AI technology now has the capabilities to enable **natural conversation flows**

Contextual continuity

Natural dialogue

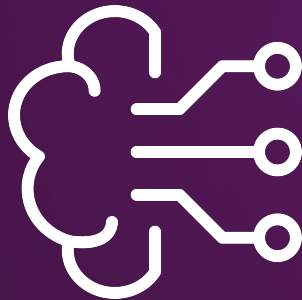

Speech-to-speech

End-to-end resolution

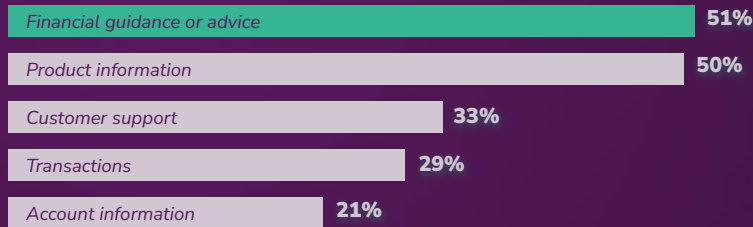

It's time for a *shift* in **thinking**

Cost cuts keep you lean.
Customer love wins the market.

What types of questions do you typically ask third-party AI assistants?

FORRESTER®

Customer experience now *depends* on how AI is operated

AI now influences **customer interactions**, **operational workflows**, **revenue opportunities** and **risk exposure** simultaneously.

Fragmented, channel-specific bots cannot deliver **consistent or durable outcomes**

Institutions are stepping back to **rethink the full customer experience**, not just adding another tool.

The **only** conversational orchestration
and control platform **you can trust.**

AI Governed at Scale

Boost enables hybrid AI
(rules + ML + GenAI) with
deterministic control, testing,
and auditability.

Measurable Value

Boost delivers automation that
resolves, not just deflects.
Resulting in happy customers,
employees and measurable cost
reduction

Outcome-Driven Orchestration

Boost orchestrates
conversations, decisions, and
workflows across voice, chat,
and human service so customers
experience one continuous
journey

Confidence Through Observability

Confidence through testing,
observability and over 10 years
and 500 implementations. Boost
enables systematic validation,
with robust AI testing tools, and

A large, light gray, stylized logo in the background. It features a circular element on the left and a hexagonal element on the right, both with internal geometric patterns. The text 'AI Vision' and '12:45' is centered over this logo.

AI Vision

Roadmap

12:45

Roadmap Focus Areas

Voice and multimodality

How do we deliver excellent
voice and multi-modal
experiences?

Agentic capabilities

How do enable more free
flowing agentic conversations
with less setup required?

Platform adoption

How do we streamline
customer adoption and
management of an AI agent?

Enterprise scalability

How do we make the platform
scalable for large, complex
enterprises?

And how do we do all this while still providing the
confidence that **regulated enterprises** expect?

Roadmap Focus Areas

Voice and multimodality

How do we deliver excellent voice and multi-modal experiences?

Agentic capabilities

How do enable more free flowing agentic conversations with less setup required?

Platform adoption

How do we streamline customer adoption and management of an AI agent?

Enterprise scalability

How do we make the platform scalable for large, complex enterprises?

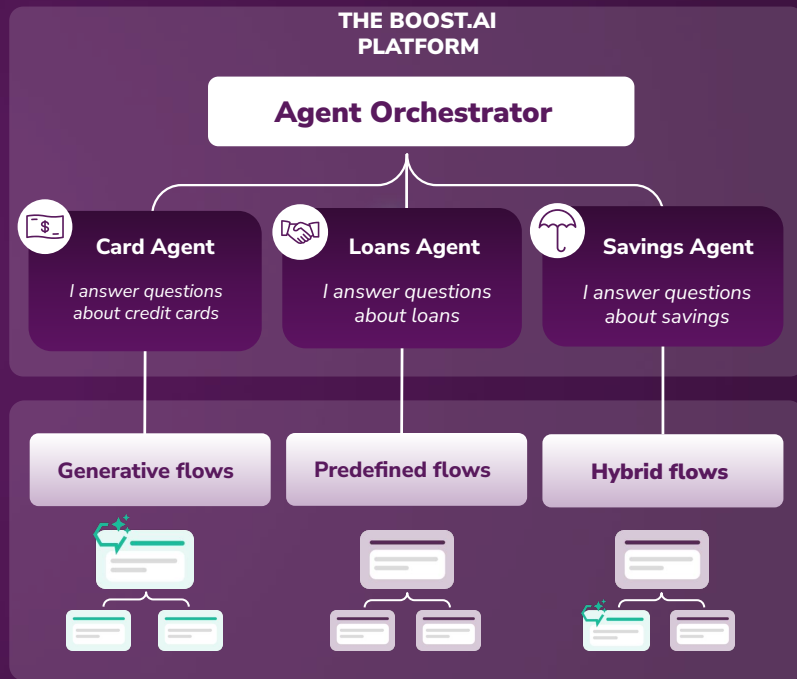

And how do we do all this while still providing the confidence that **regulated enterprises** expect?

AGENT ORCHESTRATION [BETA] (12.7 - Q1)

The foundation for scalable, agentic customer experiences

Agent Orchestration uses generative AI to dynamically route conversations to the right specialized agent based on context - not fixed rules. The Agent Orchestrator also guides the conversation between agents with built-in disambiguation and contextual understanding.

This enables more natural, scalable, and resilient customer experiences across digital channels and voice, even as conversations grow more complex.

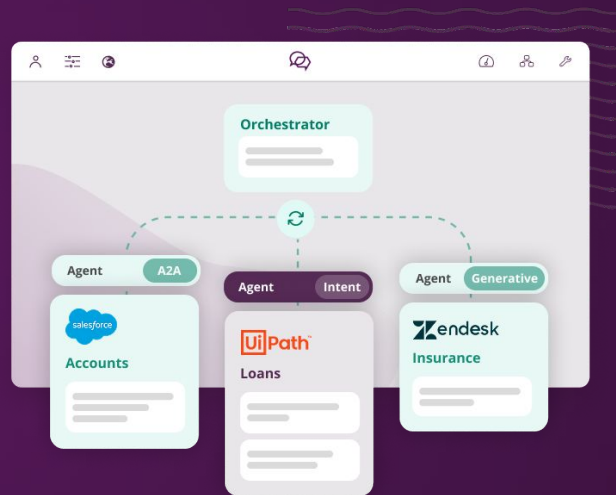

AGENT ORCHESTRATION WITH EXTERNAL A2A (Q3)

Orchestrate AI agents across platforms and vendors

Connect and coordinate external AI agents via the A2A protocol directly within the Boost platform.

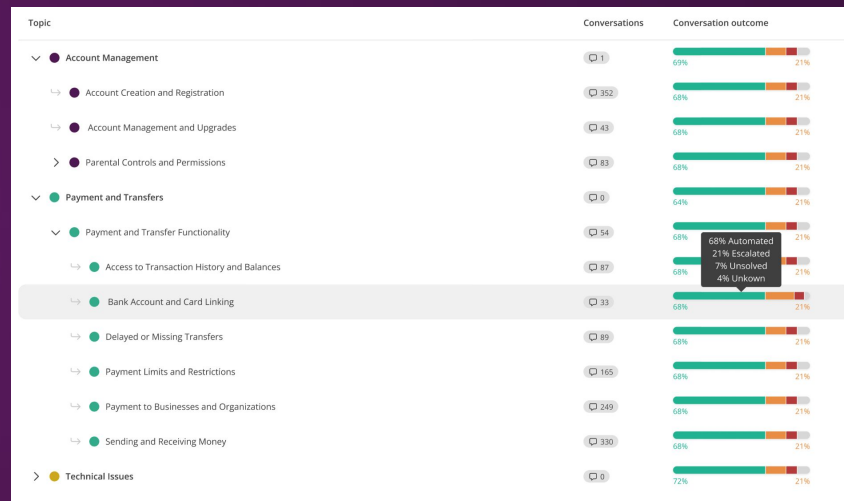

This enables multi-agent collaboration across instances and vendors, allowing Boost to orchestrate complex conversations as part of a broader AI ecosystem - not just within a single platform.

TOPIC ANALYTICS (Q2)

Topic-level insights across agentic conversations

Gain clear visibility into the topics and questions driving customer conversations, including interactions handled through Agentic Actions. Improved topic analytics shows what end users are actually asking about, giving teams actionable insight to understand demand, identify gaps, and continuously improve customer experiences as they adopt agentic AI.

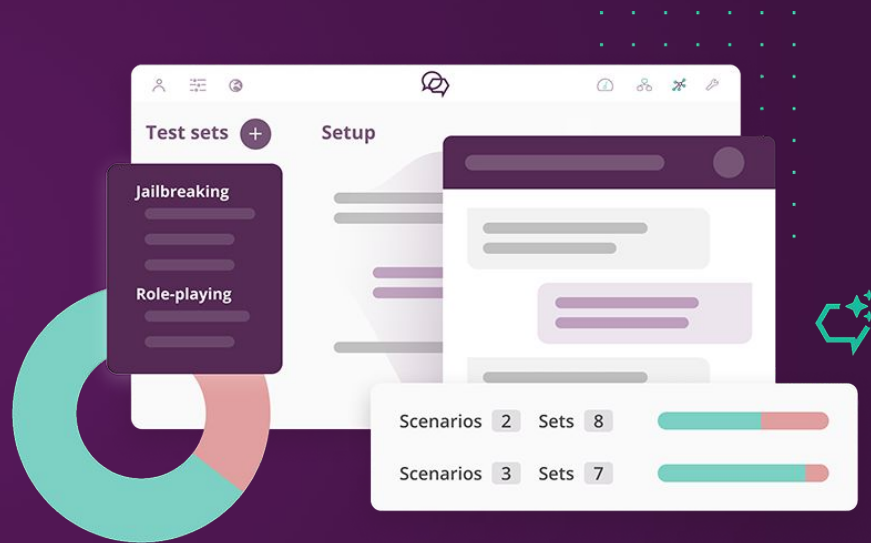

CONVERSATION TESTING V2 (Q2)

Continuously optimize knowledge for higher-quality AI Agent responses

Test end-to-end conversations - including NLU, few-shot prompts, and Orchestrator routing - at scale and over time.

Conversation Testing v2 enables teams to automatically generate, run, and track large volumes of routing and conversation tests from a single, unified Test Studio. This makes it possible to confidently validate agent behavior before and after changes, and to monitor performance as systems evolve.

KNOWLEDGE TRANSFORMATION (Q3)

Turn existing flows into agent-ready knowledge

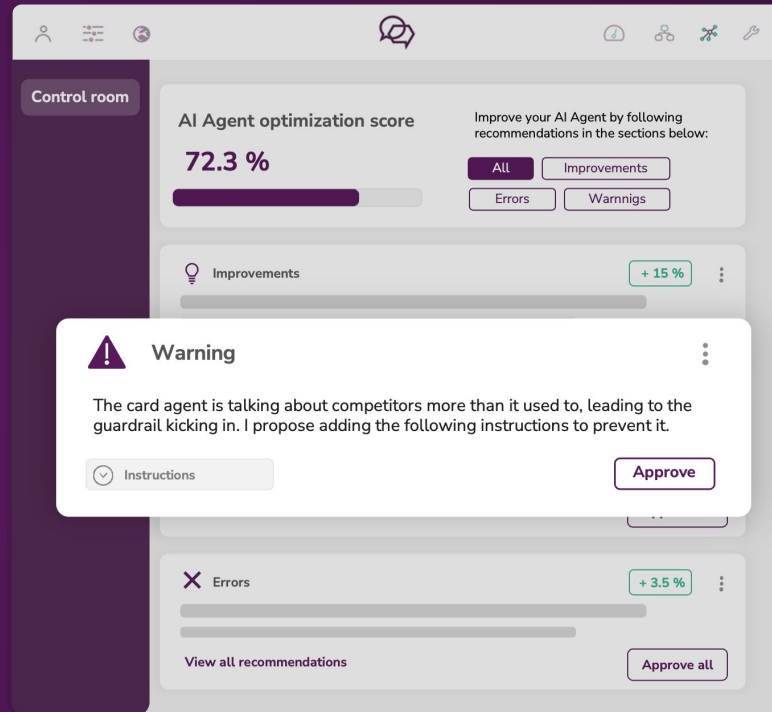

Convert existing flow and intent content directly into structured knowledge for Agentic Action. Knowledge Transformation lets teams reuse what they've already built in the Admin Panel - turning flows, actions, and linked content into usable knowledge without manual rework. This makes it faster and more practical for existing customers to adopt Agentic Action at scale.

HIGH-AGENCY CONTROL ROOM (Q4)

Monitor, control, and correct agent behavior in real time

Gain real-time visibility into agentic behavior and intervene when it matters.

The High-Agency Control Room continuously monitors AI agent actions, flags potentially unwanted behavior, and recommends immediate adjustments - enabling enterprises to safely deploy agentic AI with confidence through built-in oversight and self-healing mechanisms.

Agentic Capabilities & Control

Phase 1

Beta version with internal agent routing, supported by MVP-level analytics and testing

Phase 2

Full version with automated tooling for transitioning customers from intent-based models and inclusion of external agents with A2A

Phase 3

High-Agency control room that detects unwanted agent behavior from the AI agent and provides improvement suggestions

Phase 4

Self-improvement goes beyond internal behaviour to monitor and react to business changes outside of the system

Value for your team and end users

- ◆ Lower effort to set up, maintain, and expand
- ◆ Built-in context, disambiguation, and conversation repair
- ◆ Better customer experiences through more fluid context-aware conversations
- ◆ Secure framework for connecting external agents with visibility and security
- ◆ Self-learning ensures tight fit with organizational and

Voice and multimodality

How do we deliver excellent
voice and multi-modal
experiences?

Agentic capabilities

How do enable more free
flowing agentic conversations
with less setup required?

Roadmap Focus Areas

Platform adoption

How do we streamline
customer adoption and
management of an AI agent?

Enterprise scalability

How do we make the platform
scalable for large, complex
enterprises?

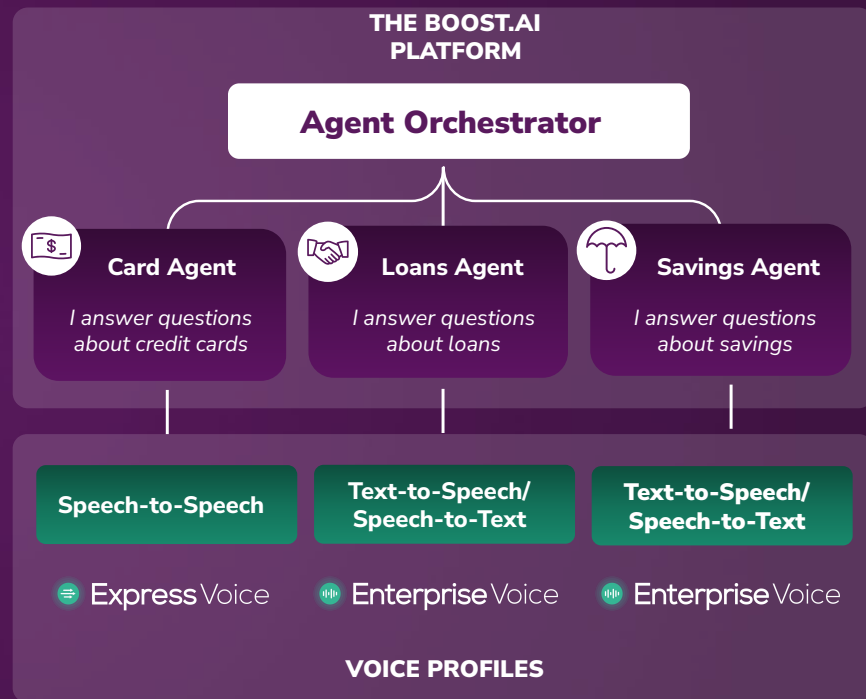

And how do we do all this while still providing the
confidence that **regulated enterprises** expect?

ADAPTIVE VOICE [12.7.2 - Q1]

Apply different voice approaches to different parts of the user journey

Adaptive Voice lets you dynamically blend speech-to-speech (Express Voice) and STT/TTS-pipeline (Enterprise voice) capabilities in a single conversation.

It enables fast, free-flowing interactions for simple use cases, while seamlessly switching to full compliance and control when complexity or regulation requires it.

AGENTIC SOUNDS AND CUSTOM SOUND EFFECTS [Q1]

Keep users engaged with subtle audio cues instead of silence

Smart fillers keep voice conversations natural while the AI is thinking. Instead of silence, they use subtle sounds or short cues to signal that the system is active and listening.

Smart fillers are configurable and context aware, helping reduce drop offs and making voice interactions feel smooth, responsive and trustworthy.

Sound effects

Control the playback of background sounds

Thinking sound

40%

Temperature

1

Voice & Multimodality

Phase 1

In-house voice offering with embedded analytics and configuration, and hybrid architecture. Beta version of voice test studio.

Phase 2

Multi-modal conversations, custom voices and sounds, and voice-specific design tools. Full version of voice test studio with automatic annotations.

Phase 3

Optimized experiences for avatars, in-app, and ubiquitous devices, informed by existing chat and CCaaS data.

Phase 4

End-to-end user engagement analytics and insights across channels, external agents, and conversations, driving user-specific recommendations

Value for your team and end users

- ◆ Natural voice experiences across telephony, apps, and avatars
- ◆ Easy, AI-assisted creation and optimization of voice-first flows
- ◆ Seamless switching between voice and chat in the same conversation
- ◆ Enterprise-grade control with flexible hybrid architecture
- ◆ Continuous, AI-driven improvements for higher automation and quality

Roadmap Focus Areas

Voice and multimodality

How do we deliver excellent voice and multi-modal experiences?

Agentic capabilities

How do enable more free flowing agentic conversations with less setup required?

Platform adoption

How do we streamline customer adoption and management of an AI agent?

Enterprise scalability

How do we make the platform scalable for large, complex enterprises?

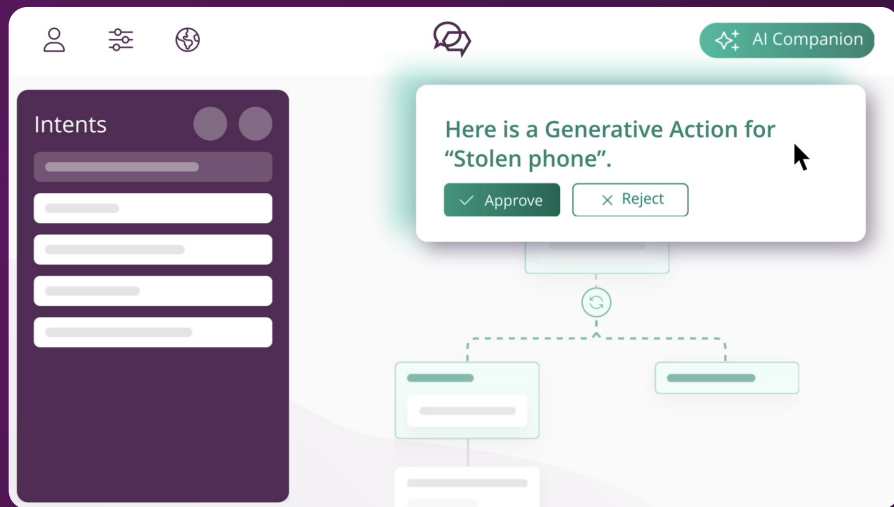

And how do we do all this while still providing the confidence that **regulated enterprises** expect?

AI COMPANION FOR FLOW BUILDING (Q4)

Build and optimize conversation flows using natural language

Create, modify, and improve conversation flows by simply describing what you want to achieve.

The AI Companion for flow building lets teams build flows conversationally, apply changes instantly, and optimize tone and structure with AI-powered suggestions - reducing complexity, speeding up iteration, and making flow building accessible to more users without deep platform expertise.

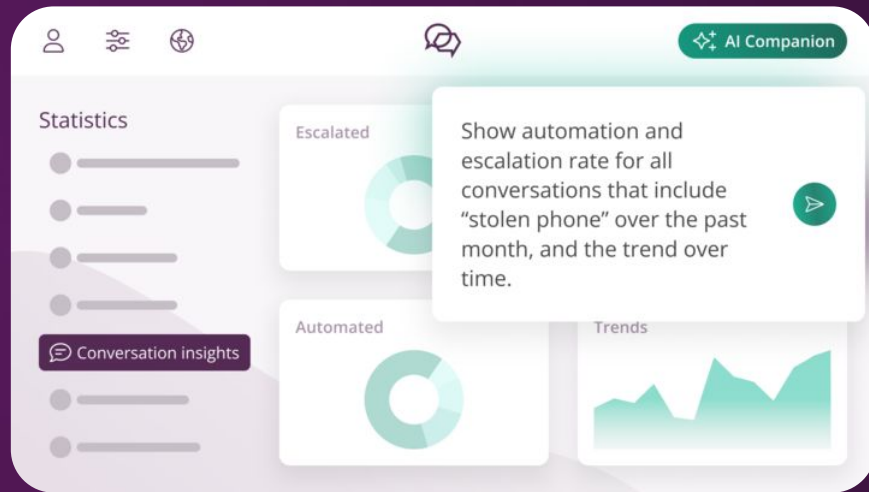

AI COMPANION FOR ANALYTICS (Q4)

Ask questions and get instant insights from your conversation data

Explore and analyze conversation data using natural language directly in the Admin Panel. The AI Companion for Analytics lets teams ask questions, generate custom metrics, and drill into results on demand - without relying on predefined dashboards, technical expertise, or data exports.

This makes advanced analytics accessible to more users and enables faster, more informed decisions.

Platform Adoption & Connectivity

Phase 1

Get Started Wizard and API Companion

Phase 2

AI Companions for building flows and generating custom analytics. Get Started Wizard is agent-based with contextual awareness of the business. Integration service to enable custom channel and human handover integrations.

Phase 3

AI Companion can generate advanced analytics views and executive summaries based on data within the system and in CCaaS and other external platforms

Phase 4

90% of admin panel interface is covered by conversational experiences with the AI Companion, augmented with visuals

Value for your team and end users

- ◆ Faster onboarding with guided setup and conversational wizards
- ◆ Self-service tools that empower both technical and non-technical users
- ◆ AI Companions that help build flows, analytics, and integrations
- ◆ Reduced friction through intuitive, conversational platform navigation
- ◆ Increased adoption driven by clear insights into performance and business value

Roadmap Focus Areas

Voice and multimodality

How do we deliver excellent
voice and multi-modal
experiences?

Agentic capabilities

How do enable more free
flowing agentic conversations
with less setup required?

Platform adoption

How do we streamline
customer adoption and
management of an AI agent?

Enterprise scalability

How do we make the platform
scalable for large, complex
enterprises?

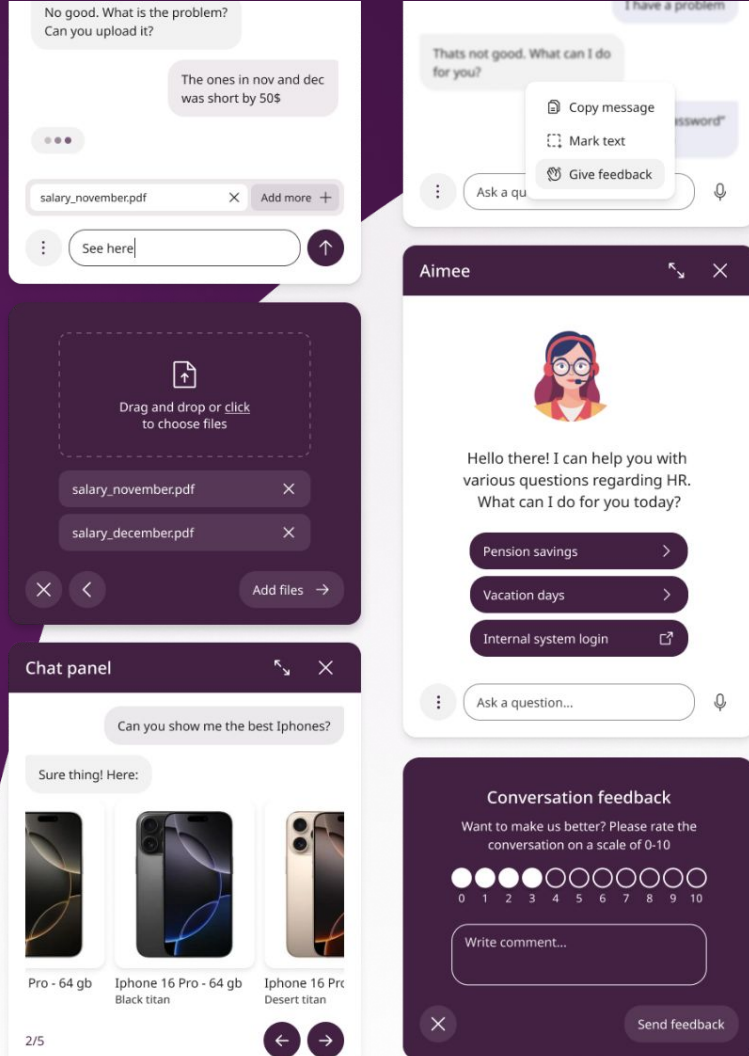

And how do we do all this while still providing the
confidence that **regulated enterprises** expect?

NEW CHAT PANEL WIDGET, FULL-SCREEN AND INLINE (Q2)

Chat experiences designed for agentic AI

The next generation of our chat interface is designed for modern AI agents, generative responses, and asynchronous interactions.

It delivers a refreshed, flexible UI with out-of-the-box full-screen and inline options, smoother handoffs to human agents, and a new Admin Panel configuration experience that lets teams customize multiple chat panel setups without relying on frontend development.

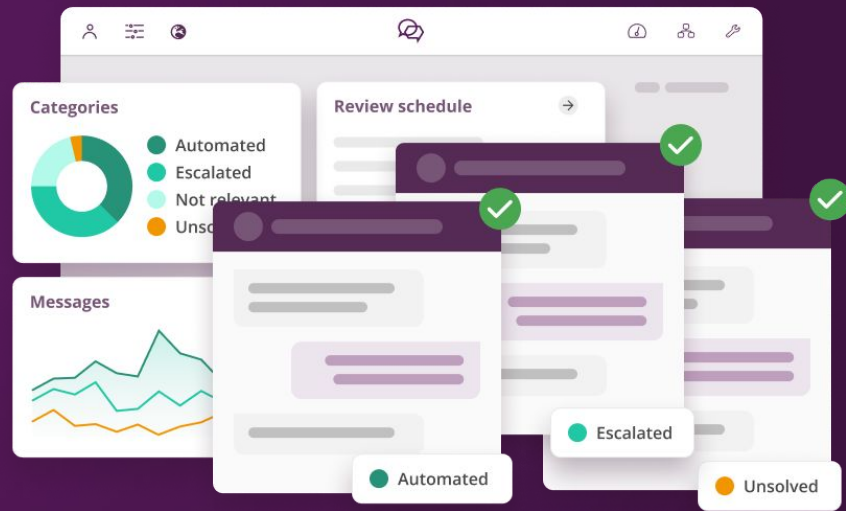

AI REVIEW - CONTINUOUS IMPROVEMENT (Q2)

Continuously improve AI Review using feedback from your own teams

Correct, fine-tune, and align AI-generated CX insights with your business context - ensuring reviews become more accurate, trusted, and useful over time.

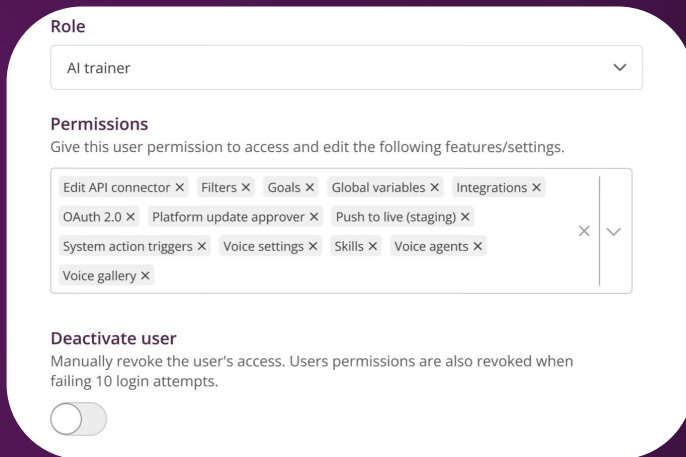

All learning stays within your environment, so you get better insights without sharing any conversation data.

MORE GRANULAR USER PERMISSIONS (Q2)

Control who can do what - down to the detail

Create custom access roles tailored to how your teams actually work. More granular user permissions let you define exactly what each user can see and do across the Boost platform, giving enterprises the flexibility to safely involve more stakeholders without overexposing sensitive capabilities.

Role

AI trainer

Permissions

Give this user permission to access and edit the following features/settings.

- Edit API connector X
- Filters X
- Goals X
- Global variables X
- Integrations X
- OAuth 2.0 X
- Platform update approver X
- Push to live (staging) X
- System action triggers X
- Voice settings X
- Skills X
- Voice agents X
- Voice gallery X

Deactivate user

Manually revoke the user's access. Users permissions are also revoked when failing 10 login attempts.

☐

Enterprise Scaling

Phase 1

Custom user roles with permission-based controls. Custom conversation analytics fields and tags.

Phase 2

New chat panel with UI-based configs, and inline and fullscreen options. External spin up, configuration, and management of instances by API.

Phase 3

Multi-instance administration dashboard and analytics, with improved options for sharing content across instances.

Phase 4

Marketplace for assets and external connections that allow customers to quickly scale and share across instances

Value for your team and end users

- ◆ Faster configuration with a new chat panel and UI-based controls
- ◆ Programmatic instance management through APIs
- ◆ Fine-grained governance for user management analytics fields
- ◆ Centralized oversight with multi-instance administration and cross-instance sharing
- ◆ Rapid expansion enabled by a marketplace for reusable assets and integrations

Roadmap highlights 2026

NOW (Q1)

- ◆ Agent orchestration (beta)
- ◆ Adaptive voice (voice profiles)
- ◆ Agentic sounds (filler messages)
- ◆ Custom sound effects
- ◆ webRTC configuration

SOON (Q2)

- ◆ New Chat Panel widget
- ◆ Chat API v3
- ◆ Voice cloning
- ◆ Multimodal conversations
- ◆ End-to-end conversation testing v2
- ◆ AI Review - continuous improvement
- ◆ Improved analytics for topics
- ◆ More granular user permissions

LATER (Q3/Q4)

- ◆ Agent Orchestration - external A2A
- ◆ Knowledge Transformation
- ◆ High-agency control room
- ◆ Multi-instance management
- ◆ AI companion for analytics
- ◆ AI companion for flow building
- ◆ No code config & integration service
- ◆ CCaaS data to boost AI Agents
- ◆ Voice Test Studio in admin panel

- ◆ Agentic capabilities
- ◆ Voice and multimodality
- ◆ Enterprise scalability
- ◆ Platform adoption

Thank you! I have retrieved your information.

Would you like me to show you if there is anything that needs to be addressed?

Example 4

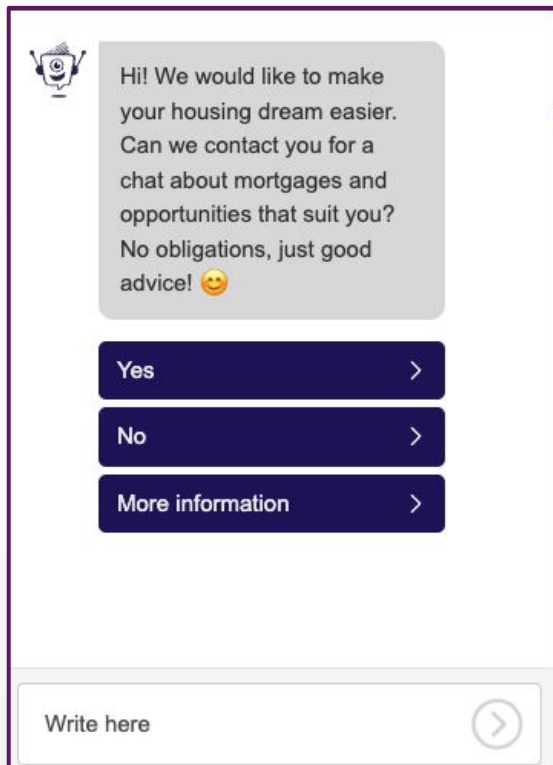

The following answers are AI-generated.

Hi there! 😊 I see that everything looks fine with your subscriptions – no freezes or unpaid invoices. What can I help you with today? 🤖

Do you need help with this or something else? 😊

Would you like us to check the status of your SIM card first?

Sales leads | Proactivity

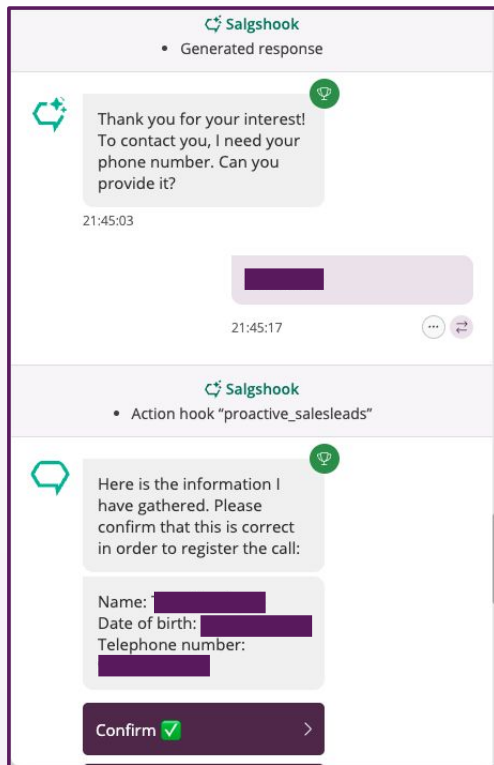

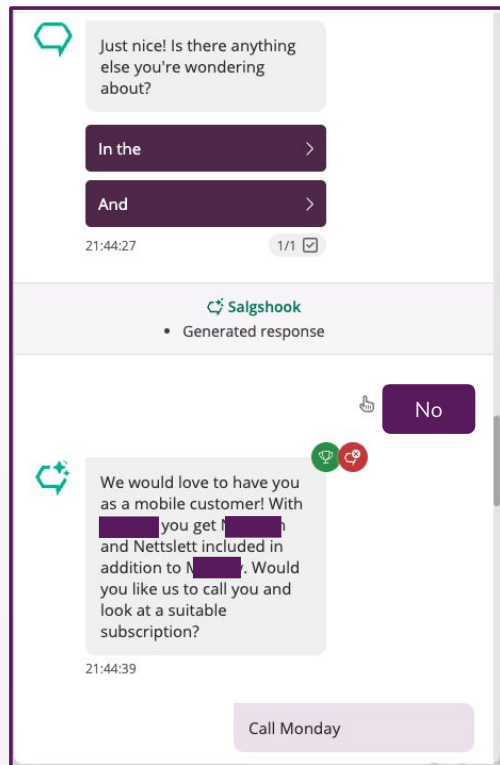

A screenshot of a chat interface. At the top left is a small icon of a robot head with headphones. To its right is a grey message bubble containing the text: "Hi! We would like to make your housing dream easier. Can we contact you for a chat about mortgages and opportunities that suit you? No obligations, just good advice! 😊". Below the bubble are three dark blue buttons with white text and right-pointing chevrons: "Yes", "No", and "More information". At the bottom is a white input field with the placeholder text "Write here" and a grey circular button with a right-pointing chevron.

Case:

The AI Agent pops up proactively as the user browses on the company's mortgage page.

After a couple of months the bank had **10M EUR** of mortgage sales initiated by the callback.

Sales leads | Proactivity

Case:

After user's issue is resolved, a Process will initiate that extracts customer intel and identifies the most suitable upsell opportunity.

Results:

16 successful cases in Jan 2026.

Headlines

Current status & Recommendations

Current status

- Top level overall solution
- Great Agentic Actions
 - Guardrails (and fallbacks), Instructions, Hooks
 - Resolved → proactive sales
- Many good integrations
- Highly skilled teams

Recommendations

- Roll-out more GenAI use-cases
- Design Knowledge for scalability
- Increase AI Reviews
- Escalation improvements
- Explore these features:
 - API Companion
 - Fullscreen chat
- Prepare for Agent Orchestration

Recommendations

Features

- API Companion
- AI Review (only 10 per day)
- Language: Smart Detection
- Fullscreen chat

Agentic Actions

Guardrails: (no changes recommended)

- Hallucination
- General Guardrail (jailbreak)
- Both lead back to pre-defined content (good)

Global instructions: Overall great!

- Delete “### Rules about 'transfer_to_a_human'”
- Transfer_to_a_human: This may need to be changed: call the function when the user “wants to make any changes to their services”

Knowledge

- Mostly boost docs
 - Some have prices - not scalable
- A few links

Notes | improvement suggestions

- Some Intent Titles do not have English titles (for example “DNA Netti kotiin”, “Muuttoilmoitus”, “Sopimuslistaus”)
- Roll out Generative Responses
- Integrations - make analysis
- Cool stuff
 - TerminationInternet, nice flow: Asks reason > collects user data > user confirms termination of specific service (integration) > email is sent to DNA > conf. Email is sent to user
 - Easier: Termination directly without sending an email to a human (maybe save time)
 - Customer wants email contact > customer sends email straight from chat and chat pick up all necessary user details (email, name, number)

Hvad kan vi hjælpe med?

what is the yearly fee of a mastercard

The price for a MasterCard credit card can vary depending on your customer offer. For example, customers who use our Association Benefits as part of the BoligBank-360 and -365 customer offers get their annual card fee refunded. You can find the annual card fee and more information about Customer Discount below.

Discussion Points & Wrap Up

15:00

Upcoming initiatives

- ◆ Session on Ticket process (to be scheduled)
- ◆ Report on technical issues + boost.ai response (awaiting report)
- ◆ Start preparation for the Agent Orchestrator
 - Legal: Approve use of boost.ai LLM for this part
 - Enablement material
 - Experiment in test
 - Expand Generative first

BOOST CAMP 2026

When

21 October 2026

Automation

Main areas to consider

- ◆ Integrations
- ◆ Drop-off reduction
- ◆ Content design
- ◆ Model Quality

Automation | Drop-off reduction

- Disable ASU:
 - Conversations w. ASU responses have lower Automation rate, lower Feedback scores, higher Unsolved %
 - Disabling ASU Requires
 - Few-Shot activated
 - Tried and tested GenAction on Unknown SAT

Conversations w. ASU responses

- Trelin: 7 500+ / month
- Berry: 12 500+ / month

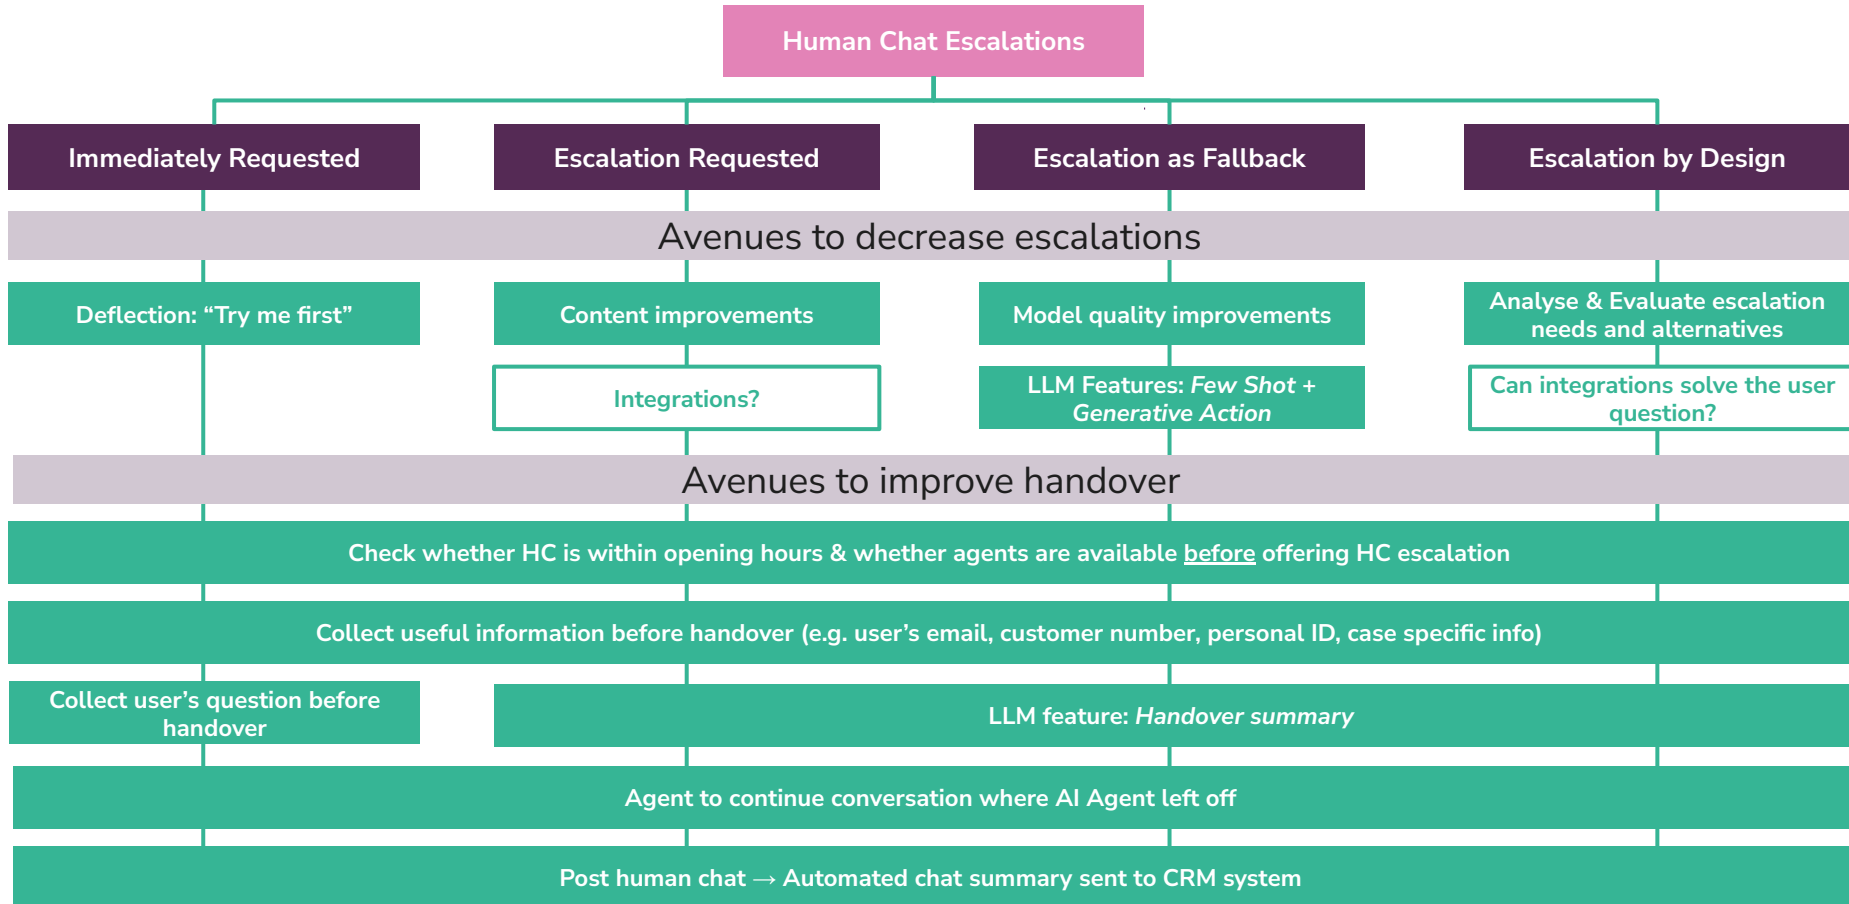

Automation | Content design

- Add additional GenActions to improve user experience
 - Use GenAction to request info we need or skip forward when we already have it
- Add English to all actions and Intent titles

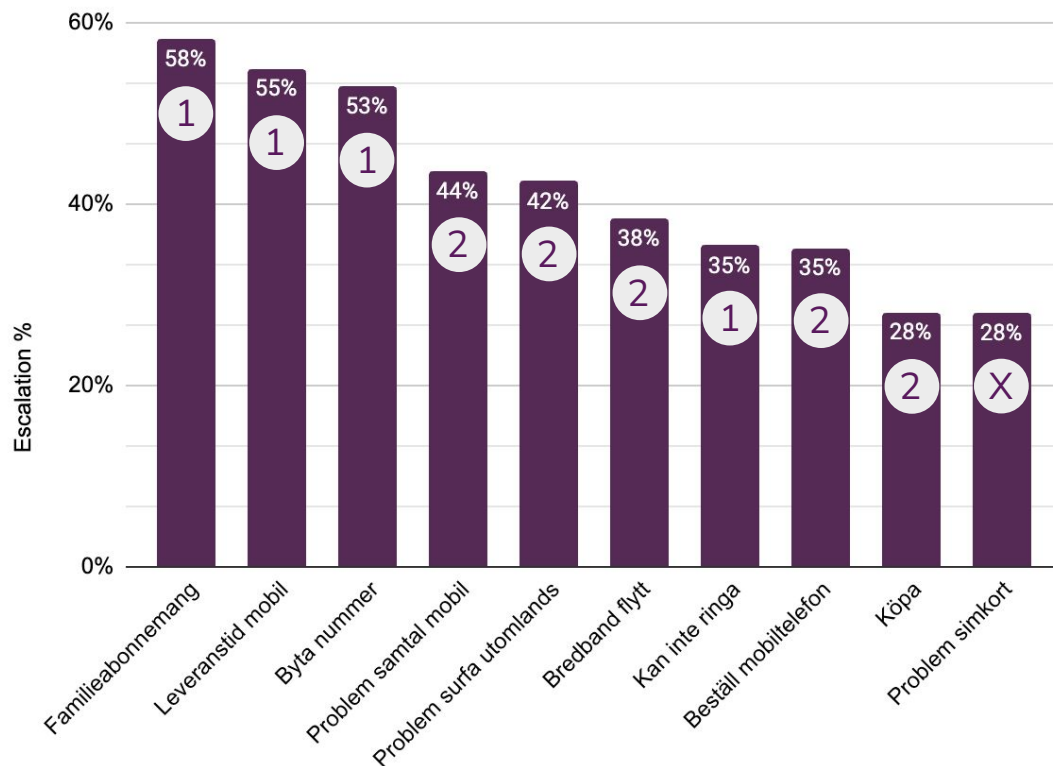

Escalations

Escalation types | Improvement initiatives

Top Human Chat Escalation topics

Impact of “ease of escalation”

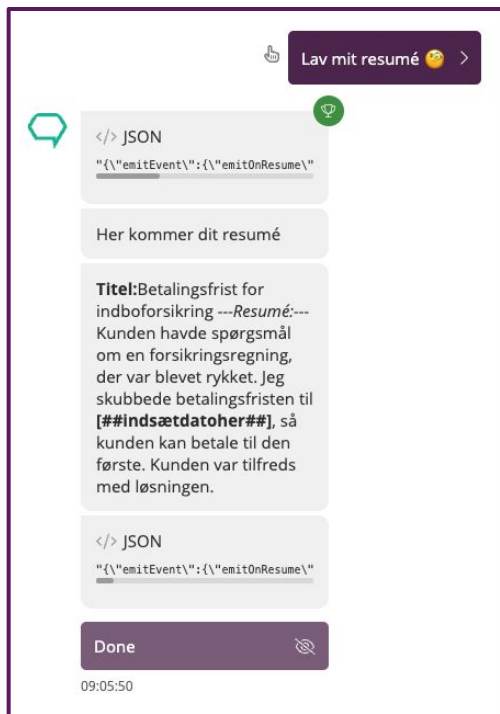

Clicks to escalation process:

- 1 1 click
- 2 2 clicks
- X No escalation path

Data is from a 3 months span (mid July to mid Oct). The 10 topics represent high volume escalation intents w. high escalation %.

Escalations | Inspiration

Examples:
Nordic FS

Adoption B2C vs. B2B

Monthly Customer Traffic
212.000

Monthly B2B Traffic
20.000

Participants

DNA core team:

- Amelie: PO
- Pernilla: Lead Ai Trainer
- AI Trainers (Hanna Mustonen,)
- Jukka Sinda: Group Manager, Digital CustomerService channels/SocialMedia
- Liisa, Business Intelligence
- Auvinen Anna, Business Development Manager (Customer Operations, B2B)

DNA senior management:

- Michael Förström, VP Digital Services
- Lasse Huttunen, VP, Customer Operations
- Katja Vilkamo, Head of Digital Services
- Jutta Soininen, Head of Insight, reporting and analyses, B2C
- Tero Laamanen, Head of Customer Care
- VP of B2B customer service
- B2C head of development
- ...

DNA Finland

Company details

- ◆ 2.8 million customers
- ◆ Market share 30%
- ◆ #2 or #3 largest after (Elisa, Telia)
- ◆ 1700 employees

Main opportunities

- ◆ No big opportunities atm
- ◆ B2B roll out (adoption)
- ◆ Voice (long-term, happy w. own developed setup w. Genesys)

Current engagement

- ◆ Boost champions, but not satisfied w. Support in specific cases (handling separately)
- ◆ 1 x external AI Agent (1x test instance)
- ◆ 80-90K conversations / month
- ◆ Great model + great CSAT + many integrations
- ◆ High escalation rate
- ◆ Roadmap:
 - Increase GenAI usage (only started in Sep 25)
 - B2B roll-out

Agenda

Notes

Thoughts

Escalations

Wanted escalation → Sales, churn prevention

Unwanted → Fallback, Immediate

Focus area

B2B, new intents are B2B

GenAI roll-out

Feedback very good

but mostly related to Escalated chats! (80% on messages, 55% on convos)

GenAction roll-out: (last 3 weeks), 13%

Not using AI Review! (only 10 per day)

Agenda

- DNA proposal:
 - Brief from DNA B2C + B2B (year in review)
 - Look at H1 vs. H2 > major shift in H2 (LLM impl.)
 - Boost Vision & Roadmap
 - "Support ticket trends" > how many support tickets sent, resolution time, monthly basis, "This is how the support is organised" (what is the process). Consider bringing Anders Reve?
 - Benchmarking (similar to last time) >>> can session be outside of BR
 - B2B vs. B2C > comparison (Amelie to get back on what exactly)
 - Performance Review > severity score, unknowns etc (B2B vs. B2C)
 - Recommendations (main recommendations and feel free to provide examples)
 - Don't focus on Escalations
 - No manual conversation reviews, but look at intent traffic + user experience
- GenAI
 - How do we see Gen AI going forward.
 - LLM model changes - Best practices of managing that change
 - Transition from NLU based to Agent Orchestrator
- KPI measurement of quality
 - Best practices on measuring the quality of the conversations
 - Validating whether the Generative Response was correct (idea: conversation testing, Hallucination, how do we identify mistakes / wrong answers). Testing tool to validate new models.)
- Adoption and channel strategy
 - Same as last time (a few slides)
 - Now use bot to have user send message through bot.
- Specific topics to focus on?
 - (e.g. Generative AI, Escalations, Adoption, CSAT, boost roadmap, benchmarking etc.)
- Goals & KPIs for 2026
 - Current status on KPIs
 - ...
- Current customer contact distribution details
 - Phone calls
 - Emails
 - Human Chat
 - AI Agent (chatbot)
 - Other?
 - B2C vs. B2B
- Participants
 - VP of B2B customer service, B2C head of develop,emt, Michael VP, Liisa, head of digital services

Agenda

- DNA proposal:
 - Benchmarking (similar to last time) >>> can session be outside of BR
 - Look at H1 vs. H2 > major shift in H2 (LLM impl.)
 - B2B vs. B2C > comparison (Amelie to get back on what exactly)
